### DETAILED ACTION

#### Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-3, 8 and 9, drawn to a nonwoven fabric.

Group 2, claim(s) 4-6, drawn to a method of making nonwoven fabric.

Group 3, claim(s) 7, drawn to an apparatus to make a nonwoven fabric.

The inventions listed as Groups 1-3 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature of a nonwoven fabric with a tensile strength ratio (MD/CD) of less than 1.5. This feature is set forth by Ferencz et al. (US 7,091,140), which provides tensile strength data for a variety of nonwoven fabrics in Figure 12/Table. In particular, nonwoven X provides a Grab Tensile Strength ratio of less than 1.5.

During a telephone conversation with Joseph Corso on 9/15/2006 a provisional election was made with traverse to prosecute the invention of Group 1, claims 1-3, 8 and 9. Affirmation of this election must be made by applicant in replying to this Office action. Claims 4-7 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1771

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 1. Claims 1-3, 8 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- A broad range or limitation together with a narrow range or limitation that falls within the 2. broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in Ex parte Wu, 10 USPO2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of Ex parte Steigewald, 131 USPO 74 (Bd. App. 1961); Ex parte Hall, 83 USPQ 38 (Bd. App. 1948); and Ex parte Hasche, 86 USPQ 481 (Bd. App. 1949). In the present instance, claims 1 and 3 recite the broad recitations a density of less than 0.10 g/cc and a weight between 12 and 150 g/m<sup>2</sup>, respectively and the claims also recite a density of between 0.70 and 0.03 g/cc and a weight between 12 and 30 g/m<sup>2</sup> which is the narrower statement of the range/limitation.

## Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 8 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Ferencz et al. (US 7,091,140 B1).

Ferencz et al. teach the creation of a hydroentangled nonwoven fabric comprising fibers of 0.45-2.7 dtex (Abstract). Figure 11 illustrates grab tensile strengths that have a MD/CD ratio of less than 1.5. The fabrics of the applied invention have basis weights ranging from 34 to about 100 g/m<sup>2</sup> (col. 10, lines 1-7). Claims 8 and 9 are rejected as the applied invention is capable of being used as either a hygiene product or a filter.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 3 is rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ferencz et al.

Although Ferencz et al. do not explicitly teach the claimed feature of grab tensile of 1.3 Newtons per 50 mm per gram of nonwoven per m<sup>2</sup>, it is reasonable to presume that said property is inherent to Ferencz et al. Support for said presumption is found in the use of like materials (i.e. a hydroentangled, spunbonded fabric of common basis weight). The

Application/Control Number: 10/529,843 Page 5

Art Unit: 1771

burden is upon Applicant to prove otherwise. In re Fitzgerald 205 USPQ 594. In

addition, the presently claimed property of of grab tensile of 1.3 Newtons per50 mm per

gram of nonwoven per m<sup>2</sup> would obviously have been present one the Ferencz et al.

product is provided. Note In re Best, 195 USPQ at 433, footnote (CCPA 1977) as to the

providing of this rejection made above under 35 USC 102.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew D. Matzek whose telephone number is (571) 272-2423.

The examiner can normally be reached on 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Terrel Morris can be reached on (571) 272-1478. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
